

# GOPIKRISHNA GUMMADIDALA

Full stack software engineer

Full Stack Software Engineer with 13+ years of experience delivering scalable enterprise applications across both modern JavaScript and .NET ecosystems — Angular with NgXs , React with Redux, Next.js, Node.js, NestJS, Python, alongside .NET, .NET Core, C#, Blazor. Specialized in designing cloud-native architectures and building custom AI agents and autonomous workflows using LLMs (Claude, Copilot), with hands-on experience integrating AI into real production environments. Strong track record leading cross-functional teams, applying clean architecture principles (SOLID, DRY, KISS), and driving CI/CD and DevOps practices across the full software development lifecycle. Experienced across REST APIs, GraphQL, RabbitMQ, Microservices, Progressive Web Apps, and IoT device integration.

## WORK EXPERIENCE

### Software Engineer Softship gmbh

10/2019 - Present

Hamburg, Germany

Leading provider of enterprise software for international liner shipping · 120+ clients worldwide · WiseTech Global group

#### Achievements/Tasks

- Migrated legacy **AngularJS** application to **Angular/React (TypeScript)**, achieving approximately 40% **improvement in load time** and 60% **reduction in bundle size** — significantly enhancing application performance and user experience.
- Built end-to-end enterprise applications: Lease Contract Management, Equipment Tracking, and Booking systems using **.NET, C#, NestJs, Node.Js** — owning the full stack from design to UI delivery.
- Designed and built an autonomous AI agent (**Bug Tracker**) using **OpenAI, NestJS( TypeScript )** for orchestration and **LLM API integration**, with **Python** components for (ticket parsing / data processing / model interfacing), powered by **Claude** — reducing manual bug-fix intervention by **50%**.
- Built scalable, reusable frontend component libraries using **Angular 21 with Ngxs**, **React 19 with Redux - Next.js**, **PrimeNG**, and **Tailwind CSS** - deployed across mobile, desktop, and web platforms.
- Delivered **RESTful** and **GraphQL APIs** using **.NET Core, ASP.NET Web API, SQL Server**, with **Elasticsearch** as a dedicated search layer and **Redis** for caching for high-volume, multi-client datasets — full client/server-side validation included.
- Authored and maintained comprehensive test suites — **Cypress, Playwright**, and **Jest** for UI component, integration, and **end-to-end** testing; **NUnit** and **Moq** for backend unit and **integration testing** with **dependency** mocking.
- Architected and delivered a reusable frontend **customization framework (ssh-customize)** supporting **Angular** and **React applications**, enabling administrators to dynamically configure UI behaviour such as visibility, enablement, and labeling without requiring code changes. Improved application flexibility by separating UI customization rules from frontend release cycles.
- Collaborated with **Product Owners** to convert **business requirements into technical specs, chunked features into deliverable increments**, and **provided effort estimates** for sprint planning, hands on experience with **Bitbucket, Confluence** and **Jira**.
- Proactively maintained all Angular applications on the latest release cycle (**quarterly upgrades through to Angular 21, React 19**), minimising technical debt and ensuring long-term framework supportability.
- Implemented **RabbitMQ**-based messaging architecture for distributed, decoupled microservice communication in high-availability environments.

Contact: Ronny Schulze

## SKILLS

Angular React Next.js  
Redux Typescript  
Node.Js NestJs Zod  
CSS3/SCSS Tailwind CSS  
C# .Net .Net Core  
Azure ASP.NET MVC  
ASP.Net OAuth  
Web API WPF  
RabbitMQ GCP  
GraphQL Entity Framework  
MongoDB NoSQL  
Redis SQL Server  
PostgreSQL Python  
TFS Git Terraform  
CI/CD Docker AWS  
MCP OpenAI FastAPI  
TDD Playwright  
Cypress Moq

## CERTIFICATES

Microsoft Certified Professional  
(08/2018)

## WORK EXPERIENCE

### Senior Software Engineer

#### Value Momentum

07/2018 - 07/2019

Hyderabad, India

Digital transformation & IT services specialist for Property & Casualty insurance · 100+ global insurer clients · Everest Group PEAK Matrix® Leader

##### Achievements/Tasks

- **Integrated PayPal and Braintree REST APIs** to implement secure end-to-end payment processing workflows — covering transaction initiation, payment confirmation, webhook handling, and failure recovery within a .NET Web API backend.
- **Built and consumed RESTful Web API services** facilitating real-time data exchange between GEICO's HISS application and external insurance providers, ensuring reliable provider communication across the platform.
- **Acted as liaison between onsite and offshore teams** — gathered and translated business requirements into technical specifications, attended daily Scrum and DEV meetings, and maintained detailed technical documentation for long-term maintainability.
- Independently delivered end-to-end backend features using **.NET Core Web API**, from design and development through testing, deployment, and integration in **AWS cloud environments**, while ensuring code quality, maintainability, and security through **SonarQube** analysis and remediation of identified issues.

### Senior Software Engineer

#### Qualminds Technologies Private Limited

04/2015 - 07/2018

Hyderabad, India

Digital product engineering & IT services · startups to enterprise

##### Achievements/Tasks

- **Designed and optimised database layer** using SQL Server — writing Stored Procedures and Views to support real-time vehicle inventory management, payment option configurations, and dealer-specific content across a multi-tenant CMS architecture.
- **Built dynamic frontend experiences** using JavaScript, jQuery, Backbone.js, and Angular — implementing dealer-configurable UI components that rendered vehicle inventory, pricing options, and promotional content across hundreds of auto dealer websites.
- **Delivered full stack features** for OfferSites, a custom CMS platform that instantly generates dealer websites for OEM automotive clients — enabling dealers to self-manage inventory, layouts, images, and payment options without developer intervention, built on ASP.NET, AngularJs, BackboneJs and SQL Server.

### Software Engineer

#### Glansa the Solution

02/2014 - 03/2015

Hyderabad, India

Software engineering & digital transformation company · IoT, DevOps & cloud solutions · 400+ global clients

##### Achievements/Tasks

- **Delivered two enterprise applications for TATA Advanced Systems** — a Performance Management System (PMS) handling employee appraisals, goal tracking, and training workflows, and a Consumables Management System (CMS) managing material mixing, expiry tracking, and IoT hardware integration — built on ASP.NET, C#, SQL Server, and WCF.
- **Sole developer on the Consumables Management System (CMS)** — independently owned full stack delivery including frontend design, database architecture, hardware integration (barcode scanners, printers), PDF generation, and Excel import/export for a manufacturing paint and assembly environment.

### Software Engineer

#### SanInformatics India Private Limited

01/2013 - 01/2014

Hyderabad, India

## LANGUAGES

English

01/2011

## ACHIEVEMENTS

### Database & Reporting Performance

Optimised MasterData database queries and report downloads — significantly reducing generation time.

### Load Time Improvement

Reduced application load time by 40–50% via AngularJS to Angular/React migration.

### UI Customisation Efficiency (03/2023)

Eliminated UI customisation dev effort across 3 apps via ssh-customize Typescript framework as shared library.

### Internationalisation & Localisation (i18n/l10n)

Built multi-language and multi-currency support from scratch using Angular i18n — enabling seamless localisation across all countries including language switching, currency formatting, and date/number localisation.

### State Management Implementation

Introduced NGXS from scratch — significantly boosting performance by eliminating redundant API calls.
